Midwest Narrow Gauge Show 2017

Cosponsored by

The Mini Bunch

And

NMRA MCR Division 1

Friday Clinic Schedule

10:00 a.m.—Geren Mortensen and Kevin Hunter

Demos all day Friday and Saturday at their booth. RC and electronics.

11:00 a.m.— Alan Carrol

The Sultan of Slash and Bash, The Prince of Plastic will be doing demos at his table all day Friday and Saturday.

12:30 p.m.—Steve Szapytowski

Turnout Magic 1: This clinic describes the combination of Berrett Hill's Touch Toggle turnout controls with Cobalt IP Digital point motors. This was a "first in the world" project that ultimately allowed Touch Toggle's built in directional indicators to work with a point motor driven both by DCC remote throttle and toggle switches placed on a control panel. The presentation describes the journey from initial concepts, garnering working knowledge of all the devices involved, to a working prototype. The result of the project was a new Berrett Hill product call the Universal Translator. Steve will also describe the use of Touch Toggles with other types of switch machines and the creation of touch screen style control panels.

1:30 p.m.—Don Bonk

Why Not a Pulp And Paper Mill—"Pampers" and "Depends" are cradle to grave paper product from western PA. Local most modelers build steel mills because they are local and familiar, but pulp and paper mills can have up to 28 different types of incoming rail loads and 22 different types of outgoing rail loads. The "Kraft Pulping Process" is discussed indicating where loads are used or generated. Actual mill photos are included.

2:30 p.m.— Matt Woods

Modeling Winter Scenery

Saturday Clinic Schedule

10:00 a.m.— Lee Rainey

"LCL Handling on the East Broad Top"? It profiles inbound freight and resulting operations on the EBT and is full of ideas for layout operators.

11:00 a.m.— Jeff Schumaker

The Kennebec Central Railroad: A History of the railroad, it's equipment and relationship to the National Home at Togus.

12:30 p.m.—Steve Szapytowski

Turnout Magic 2: Here, the adventure begun in version 1.0 of Turnout Magic continues to its logical conclusion. This clinic follows the process of integrating the new Berrett Hill Universal Translators into Steve's layout. Eventually, this was not just for the Cobalt IP Digital point motors on the new part of his layout; it included the Switchmaster stall motor switch machines on the original half of the layout. The process was not as straight forward as originally envisioned, but now all his turnouts may be operated by DCC remote throttle and touch toggles that display the closed/ thrown information on the his control panels. Steve also describes making his stunning new touch screen control surfaces.

1:30 p.m.— Sam Swanson

Modeling Maine Seacost Structures Modeling stout, utilitarian, and distinctive structures from Maine prototypes using practical, available, and inexpensive materials and paint is the focus of this clinic. Techniques for assembling, painting, and weathering structures and their supporting details will be covered using examples from the Windes Inlet module, which is part of the Great Lakes HOn30 Modular Group. Planning steps, including adapting prototype photos to drawings and building cardboard mockups, along with installing completed models into coastal scenery, will also be presented.

2:30 p.m.—NMRA MCR Division 1 Business Meeting

3:30 p.m.—Mini Bunch Business Meeting

Ask About Division 1's Membership Award Program

Get a Free 6 Month Rail Pass Membership to the NMRA Available to Those 18 and Younger Interested in Model Railroading.

See any Division 1 member at our HO and N Scale module displays at the Midwest Narrow Gauge Show for the details and a membership form.

Hey! Ask to run a train!
